

ODEX Professional

ODEX is the ultimate state of the art EDI Workstation. Its sheer flexibility and sophistication make it the chameleon of EDI products, allowing the small user to operate with total transparency and simplicity; whilst the larger corporate users can take advantage of its high performance, high throughput automated front-end capabilities, enabling seamless integration with their back office systems.

The advanced design makes optimal use of the multi-tasking and GUI features of the 32-bit Windows operating systems. ODEX Professional provides elegant user interfaces, fast background document translation, up-to-the-minute data dictionaries and robust continuous communications - all essential components of an Electronic Commerce workstation.

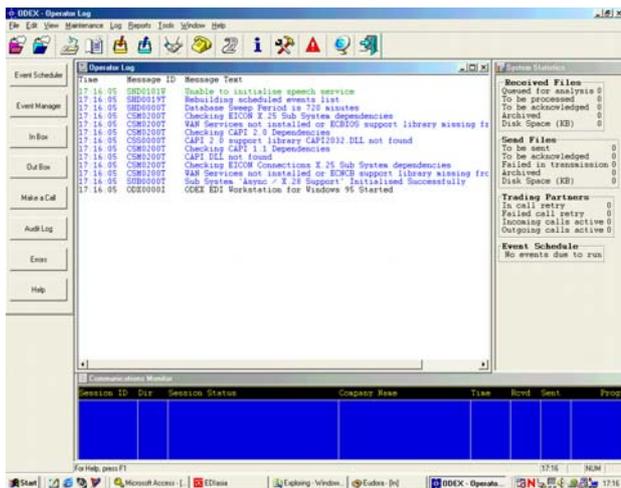

ODEX Professional components include Communications, Event Manager, Transaction Scheduler, Document Manager, Message Translator, Data Dictionary and Table Generator.

The TAME (Total Automation Management Environment) facility provided by ODEX Professional makes light work of automating timed and event driven processes. Once installed ODEX Professional can be configured to operate in background mode, completely transparent to the user, allowing around the clock unattended communications availability.

Communications

ODEX Professional can be used to connect to any of the major International Value Added Networks (VANs) including DINET Asia, Easylink, GXS/GEIS, BT EDI * Net, QRS and IBM Global Network. It supports the Odette File Transfer Protocol (OFTP), the de-facto communications mechanism used for both direct and indirect communications. Additional protocols such as TCP/IP, X.400, FTP, Pedi and SMTP are also available and are selectable at a trading partner level.

Call scheduling allows user-defined timed polling of VAN mailboxes and gateways to extract data for automated onward processing and integral password security ensures that you only receive data from authorised partners.

Translation

Document translation is integrated seamlessly, automatically converting documents between in-house application formats and EDI message standards, dynamically detecting and loading the tables necessary to produce the required data output.

ODEX Professional supports conversion between flat files and all the major International and American EDI syntax and document standards including, of course, UN/EDIFACT and ANSI ASC X12.

Sole Asian Distributors for ODEX Professional
